Enterprise Products Morgan's Point

Raw Water Treatment Plant / Morgan's Point, TX
Total Contract: \$5,400,000 / July 2015 - June 2016

As a part of providing clean water for processes associated with Morgan's Point Terminal, Bowen installed an 1000 GPM rapid clarifier for Enterprise Products.

Bowen lead the EPC team to successfully complete this project. Bowen is subcontracting to Optimized Process Designs LLC (OPD), the site General Contractor, to deliver this project.

Project Challenges:

- Bowen is working on a crowded project site.
- Bowen is working as a subcontractor on a single part of a much larger prime contract. Coordination on site is key.
- The team needs to design to a specific standard set forth by the client.
- Finding available craft in a crowded labor market.

Bowen Resourceful:

- Bowen enlisted the support of a valued Design-Build partner in Donohue & Associates.

Bowen Responsive:

- Bowen assembled a strong crew of craftsmen, even in a high demand labor market.

Bowen Results:

- Bowen was the EPC Contractor. We coordinated the design development and IFC drawings.
- Bowen is on schedule for delivery and has had Zero Incidents / Zero Injuries.

PROJECT SCOPE

- Site Work
- Concrete
- Structural Steel
- Equipment Setting
- Suez Accelerator Clarifier
- Mechanical
- Electrical

PROJECT SPECS

- EPC Delivery
- Sludge Dump Pumps
- Sludge Holding Tank and Mixer
- Clarified Water Storage Tank
- Clarified Water Pumps

PROJECT TEAM

- Bowen Contact: Bill Fyffe
- Technology: IDI / Seuz
- Engineering: Donohue & Associates

RESOURCEFUL. RESPONSIVE. RESULTS.
